

EUROPEAN MANAGEMENT SUMMARY

Having a good picture of market developments in specific European countries is crucial for many parties. Whether this is to monitor figures relating to their own foreign branches, or to discover new promising markets: the European market is constantly changing. For parties that are active in several countries, or are thinking of cross-border activities, the European Management Summary is now available. This tool, by BouwKennis designed for self-assembled use is ideally suited to monitor and compare trends and developments in various EU countries. Guten Morgen, Buenos días, Dzień dobry, Good morning.

The European construction and real estate market is highly differentiated. It is therefore not easy to follow and compare all macroeconomic developments separately and compare them when making international plans. The European Management Summary places different and self-selected countries within the European Union in the light of the most recent economic developments.

What is the state of the GDP, or the inflation in different member states and how does this affect prices in housing and construction markets? How does the European unemployment rate or consumer confidence develop? And how, at national level, do commodity prices, investments or mortgage interest rates fare?

By comparing large data sets and indicators, the European Management Summary enables you to make up-to-date and accurate plans about different European construction and housing markets. The information is presented in a dynamic manner in the user-friendly and interactive online environment of BouwKennis Data. For example, you can compare the indicators of different countries with each other, or see how an indicator per country has changed over time.

THE EUROPEAN MANAGEMENT SUMMARY ENSURES THAT:

- › You are able to monitor current and potentially interesting sales markets;
- › All important macroeconomic and construction-related key indicators are available to you on a quarterly (or monthly) basis;
- › You are aware of the latest economic developments and have quick and easy (numerical) insight into what is happening in various countries;
- › You will be able to take international corporate policy decisions on the basis of reliable data;
- › Regional targets and export plans for sales countries can be substantiated.

FREQUENCY:

Quarterly update, monthly update available on request.
